MATH 6660: Final Project
Fall 2026

General Description: Find a journal article on some aspect of the finite element method. This article should be either on an application problem, on method development, or theoretical analysis. Your job is to read the article and focus on some specific aspect of this article such as:

- a specific theorem from the paper;
- a specific finite element method innovation from the paper; or
- a specific code from the paper.

If it's a theorem or method innovation, you will need to investigate the background details so that the specific details are clear. If it's a specific code, it would be good if you could run the code and show some results. You will then give a short oral presentation ($\sim$10 minutes long) as well as a short write-up ($\leq$ 5 pages) describing this aspect. Presentations will be given at the end of the semester, and a 5-page write-up is due on Wednesday December 16th at 12noon.

NOTE: You are free (within reason) to choose the format of your presentation and write-up.

NOTE: Please talk to me (the sooner the better) if you are having problems finding a suitable article/topic.

NOTE: Your grade will depend on the quality of your presentation and the quality of the final report.

Details:

1. **[Due Monday Nov. 9]** Choose your journal article. Submit a title and a couple of sentences on your proposed project.
2. **[Dec. 7 (M, 9:55), Dec. 9 (W, 9:55), Dec. 11 (F, 9:55), Dec. 16 (W, 7:30)]** Give presentations ($\sim$ 10 minutes each)
3. **[Due Tuesday Dec. 16 at 12noon]** Turn-in final write-up.
